

## Estimation of Suburbanization intensity of the Olomouc Region By Geographical Information Systems

RNDr. Jaroslav BURIAN  
jaroslav.burian@gmail.com

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University, Olomouc

## Introduction

- Part of project „Research of citizen movement between urban and suburban space in olomouc region“
  - Delimitation of suburban area – RS, statistics data, mental maps
  - Analysis of population movement
  - Analysis of urban processes
  - Synthesis of knowledges for prediction of future development and landuse optimization
  - Creation of Scenarios of regional development
- Urban planning – good cooperation with local government
- Visualization

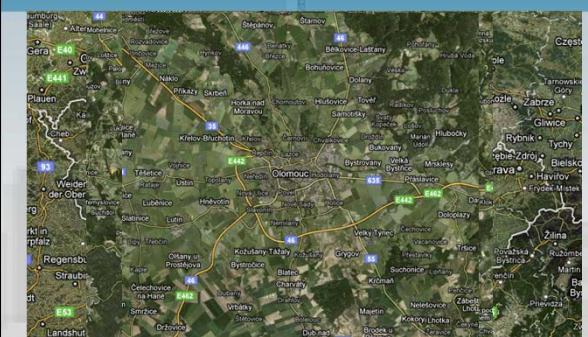

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

## Geographical x GIS approach to suburbanization

- Suburbanization**
  - Part of urban processes, moving people from city to suburbs
  - Commercial x residential suburbanization
  - Increasing of commuting, age structure changes, economical changes, creation of new urban plans, increase of housing, increase of industrial areas...
- Often based only on description (geographical approach) and not on analysis (GIS approach)
- Each factor described or measured only as a separated topic
- No methodological approach how to estimate intensity of this process and how to predict it

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

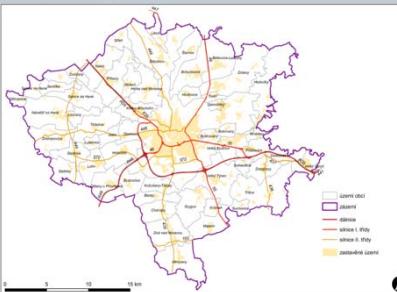

## Olomouc region

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

## Localisation

- Olomouc city
  - 100 000 inhabitants
  - 5th largest city
- Olomouc region
  - 168 000 inhabitants

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

## Procedure of determination of suburbanization intensity

1. Delimitation of area of urban processes (pre-delimitation)
2. Determination of period of suburbanization
3. Selection of criteria and determination of intensities
4. Determination of suburbanization intensity
5. Determination of suburbanization intensity – influence of Olomouc city

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

## FUA (functional urban area)

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

**Pohos**

### 1. Delimitation of area of urban processes

- Commuting to central city
- FUA - Functional Urban Area
- More than 25% of people commuting to Olomouc
- Selected area – FUA + ORP Olomouc = FUA+
- 53 municipalities + Olomouc

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

Jaroslav BURAN  
Olomouc 2011

**Pohos**

### 2. Determination of period of suburbanization

- Determination by migration balance
- Since 1996 to 2008 - decreasing
- Olomouc – decreasing nr. of inhabitants
- Olomouc + suburban area - increasing nr. of inhabitants

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

**Pohos**

### Development of population

#### CHANGES IN NUMBER OF INHABITANTS IN OLOMOUC CITY AND FUA OLOMOUC in 1991-2008

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

**Pohos**

### Age structure of the emigrants

#### AGE STRUCTURE OF EMIGRANTS FROM OLOMOUC CITY TO FUA OLOMOUC in 1991-2009

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

**Pohos**

### 3. Selection criteria and determination of Intensities

- Statistical selection – multi criterial evaluation

Criterias	Migration balance	Housing intensity	Commuting intensity	Buil-up areas intensity
Fuller triangle	0,484	0,172	0,016	0,328
Geometric mean	0,343	0,243	0,140	0,275
Saaty method	0,343	0,243	0,140	0,273
Average value	0,390	0,219	0,098	0,292
Final value	<b>0,4</b>	<b>0,2</b>	<b>0,1</b>	<b>0,3</b>

<http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

**Pohos**

## Selected criterias

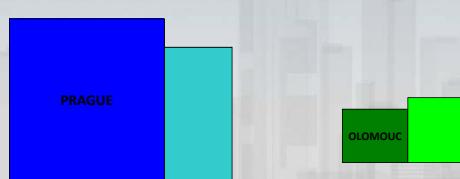

**Criterias:**

- **Migration intensity** – migration balance
- **Build-up areas intensity** – increase of build-up areas
- **Housing intensity** – increase of number of finished flats and houses
- **Commuting intensity** – number of people commuting to Olomouc from all commuting people

 <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

## 3. Selection criteria and determination of Intensities

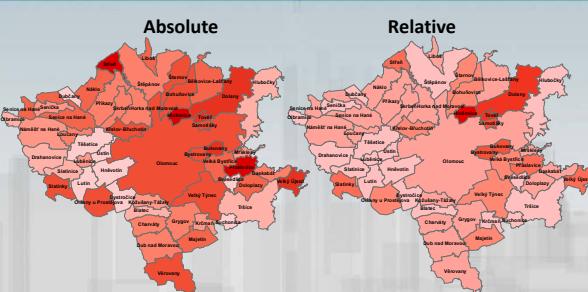

- Absolute x relative values
- Original value/number of inhabitants \* 1000

 <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

## Housing Intensity

**Absolute**      **Relative**

 <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

## 4. Determination of suburbanization intensity

- Reclassification of intensities (relativisation of original values of intensities)
- Weighted overlay of 4 main intensities

- Migration intensity - 0,4
- Housing intensity - 0,2
- Commuting intensity - 0,1
- Built-up intensity - 0,3

 <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

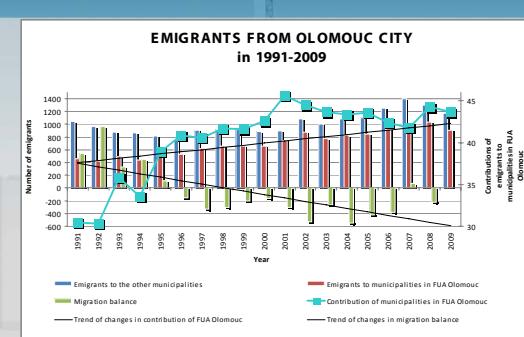

## 5. Determination of suburbanization intensity – influence of Olomouc city

- Influence of all cities
- Influence of Olomouc city only
- accumulated number of immigrants from Olomouc/accumulated number of all immigrants
- Since 1992 to 2001 the percentage of emigrants from Olomouc to communities in suburban area is increasing from 30 to 45 %

 <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

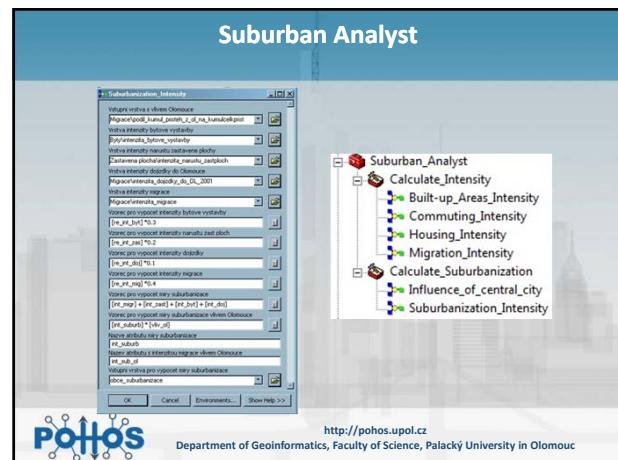

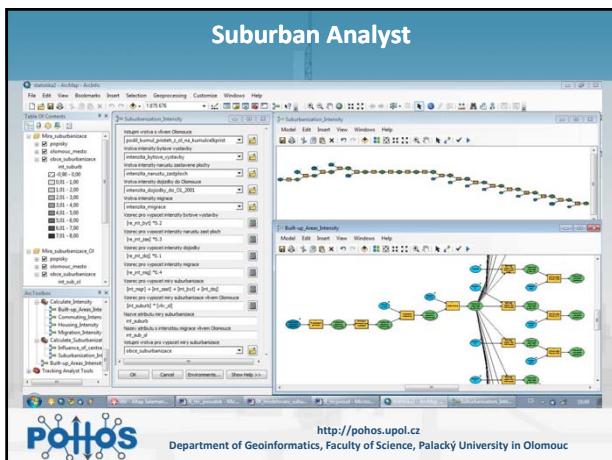

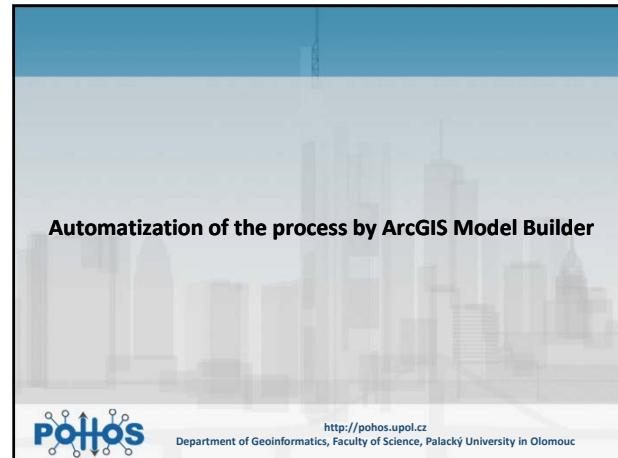

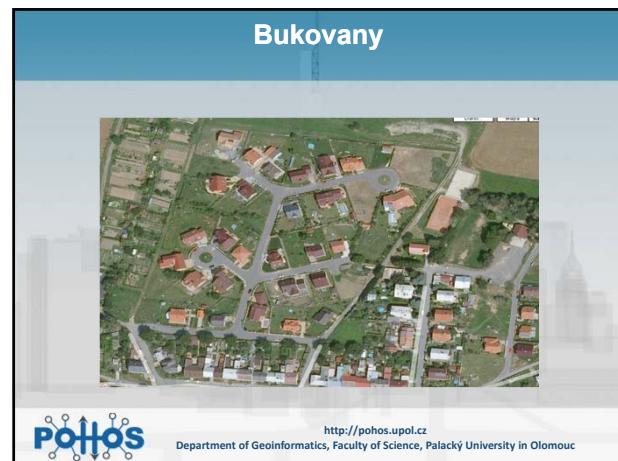

## Emigrants from Olomouc city

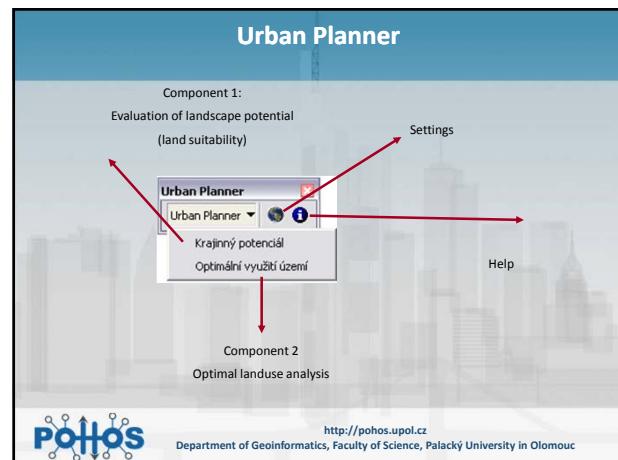

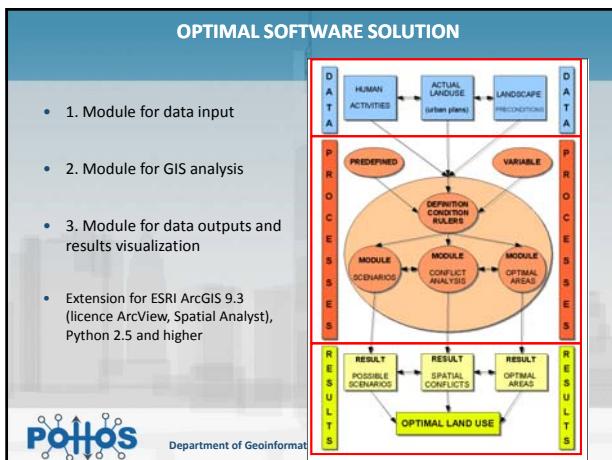

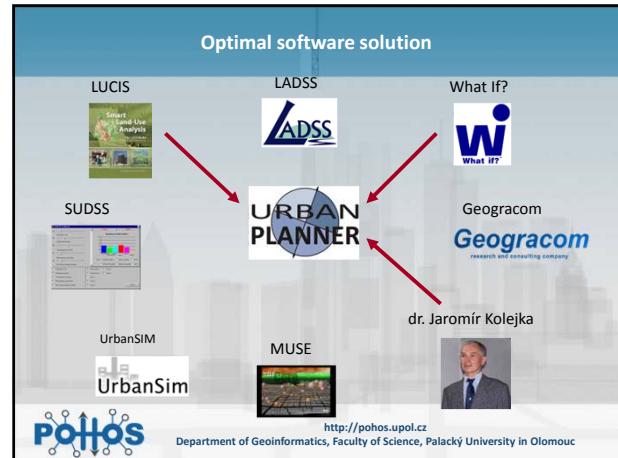

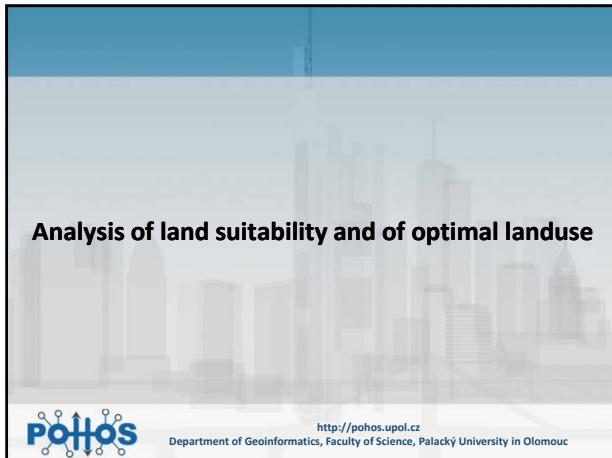

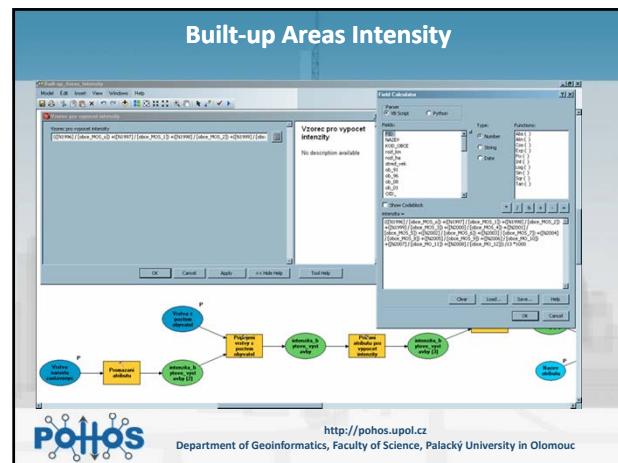

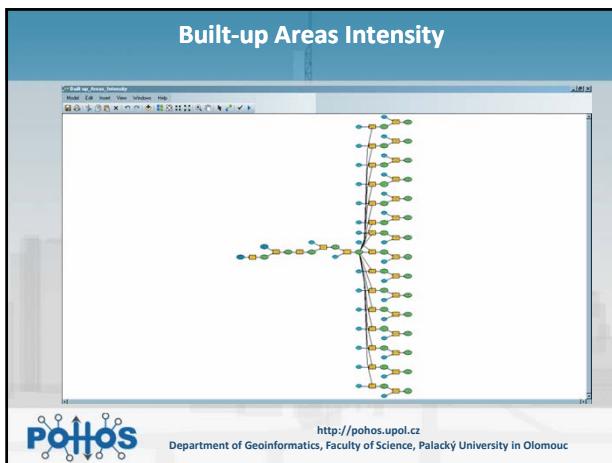

**EMIGRANTS FROM OLOMOUC CITY  
in 1991-2009**

 <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

### Evaluation of landscape potential

**Urban Planner - Land suitability**

Land suitability: Residential

1. Physical-geographical factors    2. Physical-geographical factors    3. Weights setting

Factor:	Factor weight:	Rating:	
<input checked="" type="checkbox"/> Relief (slope)	2	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Flood hazard	10	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Protective areas of water resources	6	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Protective areas of natural healing resources	4	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Geology	10	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Man protective areas	2	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> System of ecological stability	10	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Forest	2	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>

**Pohos** <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

### Evaluation of landscape potential

**Urban Planner - Land suitability**

Land suitability: Residential

1. Physical-geographical factors    2. Physical-geographical factors    3. Weights setting

Factor:	Factor weight:	Rating:	
<input checked="" type="checkbox"/> Distance of residential areas	2	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/> Distance of industrial areas	5	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Distance of recreational areas	2	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Distance of services	4	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Distance of networks	10	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Distance of roads	6	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/> Distance of motorway junctions	0	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Noise	2	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Protective areas of sewage water treatment plants	2	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>
<input checked="" type="checkbox"/> Protective areas of electricity	2	<input type="button" value="Setting"/>	<input checked="" type="checkbox"/>

**Pohos** <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

### Evaluation of landscape potential

**Pohos bydlení: Rating - Relief (slope)**

Feature Class: Corkum (interval 5 m)  
D:\User\Starynek\UPOL\Magisterská\DP\Data07\Visby

Attribute: Elevation [m] WST1\_M

Vhodnost:	Step [m]
1 - Lowest	1200 - 9999
2 - Very low	1050 - 1200
3 - Low	900 - 1050
4 - Below average	750 - 900
5 - Average	600 - 750
6 - Above average	450 - 600
7 - High	300 - 450
8 - Very high	150 - 300
9 - Highest	0 - 150
<input type="checkbox"/> Eliminate	

**Byt bydlení: Hodnocení faktoru - Lesní plochy**

Název shapelite - Lesy  
D:\User\Starynek\UPOL\Magisterská\DP\Data07\Lesy

Vhodnost: 0 - Výplad

Název shapelite - Ochranné pásmo lesa  
D:\User\Starynek\UPOL\Magisterská\DP\Data07\Lesy

Vhodnost: 1 - Nízká

**Pohos** <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

### Evaluation of landscape potential

**Urban Planner - Land suitability**

Land suitability: Residential

1. Physical-geographical factors    2. Physical-geographical factors    3. Weights setting

Physical-geographical factors      Social-economical factors

25 %  75 %

**Pohos** <http://pohos.upol.cz>  
Department of Geoinformatics, Faculty of Science, Palacký University in Olomouc

### Optimal landuse analysis

- input:** rasters of landscape suitability, actual landuse
- output:** vector layer of optimal landuse

	0	0 % - 30 %	30 % - 50 %	50 % - 70 %	70 % - 85 %	85 % - 100 %
Category	Very unsuitable	Unsuitable	Low suitability	Average suitability	High suitability	Very high suitability
Abreviation	NUL	UNS	LOW	AVE	HIG	VER

\* conflict areas –NUL, UNS, LOW  actual land use
